[C/C++ IDE] CLion 配置使用教程

1.Clion下载地址

https://www.jetbrains.com/clion/download/

2.MinGw 下载路径:

https://sourceforge.net/projects/mingw-w64/files/

进去后往下拉,看到如下列表,点第一个下载即可:

MinGW-W64 GCC-8.1.0

x86_64-posix-sjlj

x86_64-posix-seh

x86_64-win32-sjlj

x86_64-win32-seh

i686-posix-sjlj

i686-posix-dwarf

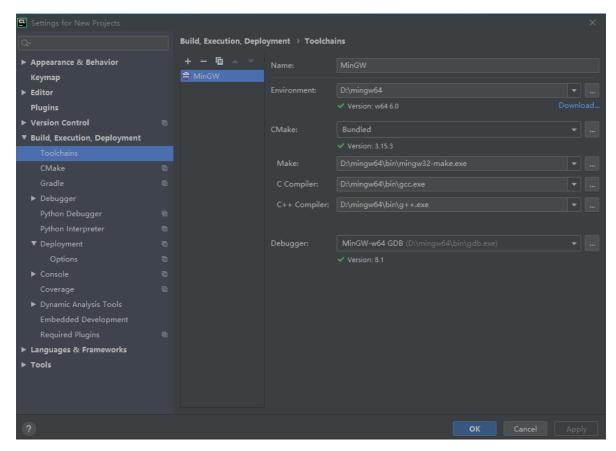

i686-win32-sili

i686-win32-dwarf

下载完成后,解压到 D 盘根目录,形如: D:\mingw64

3.配置 CLion Toolchain 环境

settings -> Build...>Toolchains -> 点加号 + (使用 Mingw 编译环境),相关环境参数如下图示:

D:\mingw64

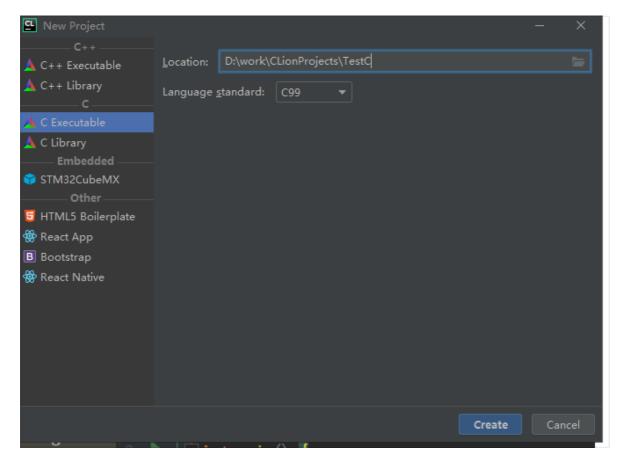

D:\mingw64\bin\mingw32-make.exe

D:\mingw64\bin\gcc.exe

D:\mingw64\bin\g++.exe

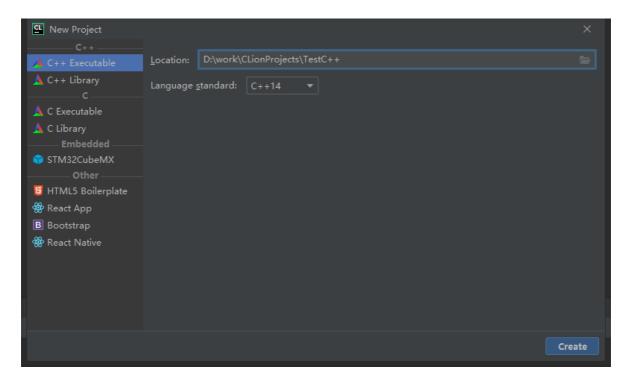

D:\mingw64\bin\gdb.exe

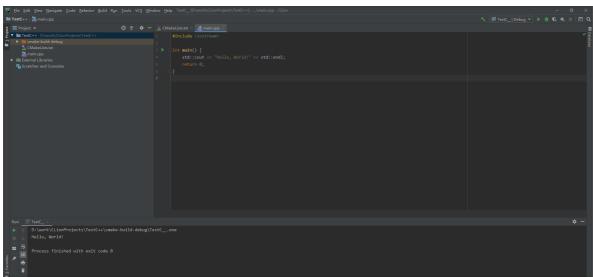

4.新建C工程

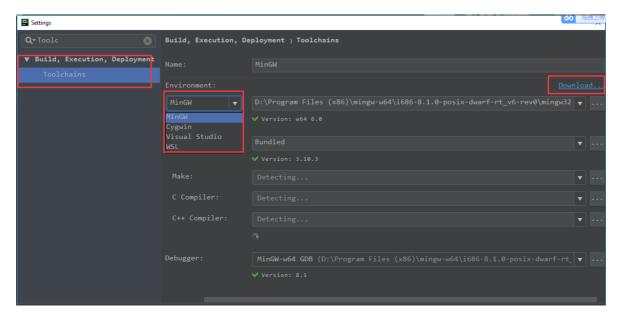

```
| Process | Service | Serv
```

5.新建 C++ 工程

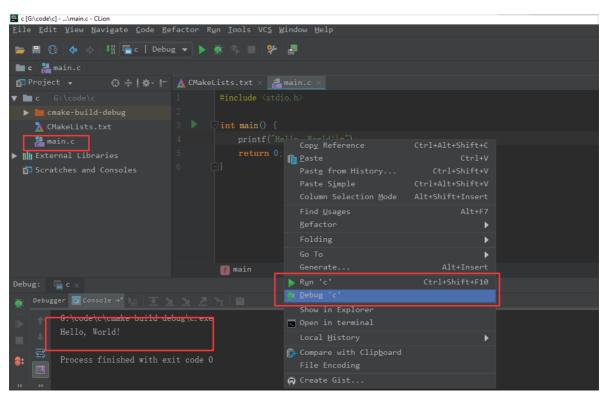

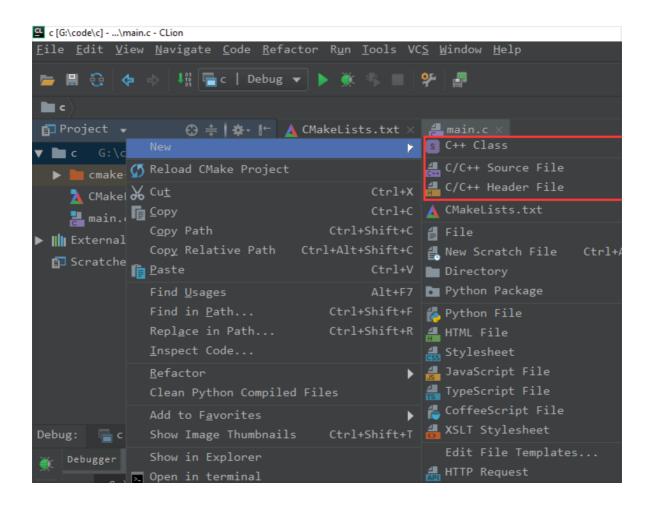

默认已生成了main.c,但是我们并不能运行,因为我们还缺少编译环境,点击Setting打开设置,搜索Toolchains,我们发现clion为我们提供的环境有这么几种MinGW,CygWin,Visual studio等,我此处选择的是MinGw,点击右侧download,下载后运行安装即可,然后在Enviroment右侧选择mingw-w64的位置即可,如下图:

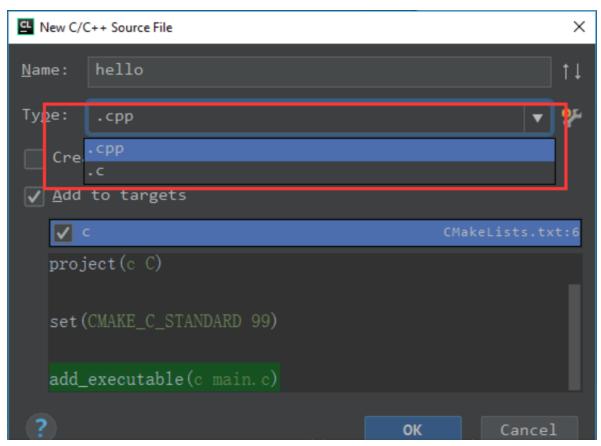

操作完如上步骤后,打开 main.c 鼠标放在 main 函数里面 点击右键运行观察控制台 你会发现期待已久的"hello world"终于出现了,至此我们的第一个 c 程序已经成功 运行!如下图

注:另外如果我们可以自行创建 c/c++文件,如图:

C语言选择.c, C++选择.cpp!
